EVERYTHING ARISES FROM 3B'S CREATIVITY, TECHNOLOGY AND EXPERIENCE. THIS IS THE REASON WHY OUR COMPANY'S AIM IS TO BE CLOSE TO THE CUSTOMER, FROM THE DESIGN OF THE PRODUCT, TO ITS DEVELOPMENT AND INDUSTRIALIZATION UNTIL IT IS DELIVERED TO THE FINAL DESTINATION, ALL THIS IN A CONTINUED WORK OF CONFRONTATION AND CO-OPERATION.

WE WORK ALSO REMOTELY IN ORDER TO BE EXTREMELY EFFICIENT.

3B's prototype and sampling department is very proficient and can be managed with the customer also in a videoconference, checking drawings and technical specifications together without wasting precious time by travelling.

DEVELOPMENT OF THE TECHNICAL DRAWINGS AND OPTIMIZATION OF THE PROJECTS IN A VERY SHORT TIMEFRAME.

PVC FREE REACH COMPLIANT

Coating materials are all PVC-FREE and REACH certified to improve the protection of human health and the environment from the risks that can be posed by chemicals.

What is REACH?
 REACH is the Regulation on Registration, Evaluation, Authorization and Restriction of Chemicals. It entered into force on 1st June 2007. It streamlines and improves the former legislative framework on chemicals of the European Union (EU). The main aims of REACH are to ensure a high level of protection of human health and the environment from the risks that can be posed by chemicals, the promotion of alternative test methods, the free circulation of substances on the internal market and enhancing competitiveness and innovation. REACH makes industry responsible for assessing and managing the risks posed by chemicals and providing appropriate safety information to their users. In parallel, the European Union can take additional measures on highly dangerous substances, where there is a need for complementing action at EU level.

LOW VOCS

The panels have extremely low VOCs (Volatile Organic Compounds) emissions, well below any limit required by the furniture industry.

What is VOCs?
 Volatile organic compounds (VOCs) are emitted as gases from certain solids or liquids. VOCs include a variety of chemicals, some of which may have short - and long-term adverse health effects. Concentrations of many VOCs are consistently higher indoors (up to ten times higher) than outdoors. VOCs are emitted by a wide array of products numbering in the thousands. Examples include: paints and lacquers, paint strippers, cleaning supplies, pesticides, building materials and furnishings, office equipment such as copiers and printers, correction fluids and carbonless copy paper, graphics and craft materials including glues and adhesives, permanent markers and photographic solutions.

<http://epa.gov>

FSC MDF

All MDF panels have FSC (Forest Stewardship Council) certification that ensures that are produced in accordance with their exacting processes for sustainable harvesting and promotion of regrowth.

What is FSC?
 The Forest Stewardship Council mission is to promote environmentally sound, socially beneficial and economically prosperous management of the world's forests. Our vision is that we can meet our current needs for forest products without compromising the health of the world's forests for future generations.

CARB P2 MDF

WHAT IS CARB?
 In 2008 the State of California adopted regulations to address formaldehyde exposure from composite wood products through the establishment of emissions controls. The new requirements set upper limits on formaldehyde emissions from composite wood products sold in California or used to make finished goods offered for sale in California. The first phase of the regulation, known as CARB Phase 1, took effect on January 1, 2009. The next phase of the regulation, known as CARB Phase 2, took effect on January 1, 2011. As with CARB Phase 1, CARB Phase 2 has defined guidelines for the manufacturer, distributor and fabricator of composite wood products as to when they must comply with CARB Phase 2.
